

Creating a culture to work and innovate everywhere

Technology has opened up new ways for startups to foster collaboration and empower their workforce to innovate – but you need the right culture to make it happen.

Use this checklist to help your team successfully work and innovate everywhere.

1. Secure your devices and systems

Make sure your technology infrastructure is secure (including any personal devices used for work), but able to adapt to employees' needs in different locations.

2. Assign access levels for data

Setting up Roles-Based Access (RBAC) will give your team access to the data they need to make informed decisions, while ensuring sensitive information stays secure.

3. Use productivity tools to improve efficiency

Productivity tools can streamline workflows, speed up communication and improve time management, allowing your team to work effectively wherever they are.

4. Develop structures for innovation

Provide structure for innovative thinking. Establish processes so anyone can test new concepts in a safe environment, and share learnings from ideas that didn't work.

5. Seek out knowledge each month

Get inspired by new ideas and conversations. Set up monthly knowledge sharing opportunities for your team, [join networking groups](#) and attend webinars for expert perspectives.

6. Continue to foster a supportive environment

Create a workplace where everyone feels comfortable to share ideas. Encourage open communication, celebrate achievements and focus on learning from mistakes.
